

For release on 13th July 2009

Sunfuel signs Initial Cooperation Agreement with Aim listed Landkom International plc.

Sunfuel is pleased to announce that it has signed an Initial Cooperation Agreement with Landkom International plc, an Aim quoted scale producer of agricultural commodities in Western Ukraine, to develop, grow and process a new non edible oil seed variant for biodiesel, known as Isis (“Isis”).

Landkom and Sunfuel have jointly tested Isis in Ukraine, Europe and South Africa with leading universities and commercial fuel companies and are now moving to commercialise the seed. Isis is similar to oil seed rape (“OSR”) but considerably cheaper to grow than both OSR and palm oil, the other main source for biodiesel production, as it can be grown on marginal quality or fallow farming land with a reduced fertiliser requirement.

An Initial Cooperation Agreement was signed by the two companies on 10th July whereby Landkom agrees to contribute the land and agricultural production resources to grow and harvest the seeds and Sunfuel will invest in the fuel processing facilities at Landkom’s operations in Dobrosyn, Western Ukraine, close to the Polish border.

This spring, Landkom planted approximately 1,000 hectares (“ha”) of Isis on marginal quality land not suitable for the Group’s food crops to demonstrate proof of concept. Tests show that the biodiesel produced by this seed, which has already been blended and tested with a major Ukrainian fuel retailer in blends with diesel of between 5% to 20%, is usable at significantly lower temperatures than equivalent blends produced from palm oil and importantly, these diesel blends have passed EU diesel specifications.

Landkom and Sunfuel expect to formalise a further cooperation agreement in the near future to extend the working relationship between the two companies.

Notes to Editors

Sunfuel is a specialist CleanTech company with operations in Ukraine and South Africa. Sunfuel focuses on converting low value or waste streams into high value product and is an international provider of various forms of bioenergy. Sunfuel’s consultancy operation also plays a significant role in enabling its corporate customers to achieve their corporate and social responsibility programmes. For further information please see www.sunfuel.com.

Landkom International PLC is an Aim quoted large scale producer of agricultural feedstock, principally oil seed rape and wheat, for supply to the European markets. Operating in Western Ukraine in the prime, fertile lands close to the border with Poland, and the Crimea, Landkom has planted over 30,000 hectares for harvest in 2009. Landkom is implementing Western-style agronomy practices using modern agricultural equipment in order to carry out efficient, large-scale farming. For further information please see www.landkom.com.
